(a) target vs metal Z, by anion family
chalcogenide
halide
pnictide
target $A = \sqrt{\varepsilon_{\infty,xx}}$
metal atomic number Z_M
(b) per-anion sample counts
number of binaries
19
24
30
8

N
P
anion (outer-LOCO fold)
(c) target distribution by anion family
chalcogenide (n=81)
halide (n=103)
pnictide (n=9)
count
target $A = \sqrt{\varepsilon_{\infty,xx}}$
